Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-5 and 9-10 are rejected under 35 U.S.C. 102(b) as being anticipated by Kajinuma (6,132,258).

Kajinuma, figures 1, 5, 11 and 14, discloses an electrical connector comprising:

first and second connectors (10 and 20), which are connectable to each other in a predetermined connecting direction;

wherein the first connector comprising a housing (12), a plurality of contacts (14) supported by the housing, and a metal reinforcement member (16) fixed to the housing and extending in a first direction perpendicular to the connecting direction;

wherein the reinforcement member including a pair of engagement projections (16b);

wherein the second connector comprising an engagement groove (22a) engageable with the reinforcement member; and

wherein the first and second connectors are permitted to be offset from each other in the first direction intersecting the connecting direction and guided with respect to each other for connection thereof when the pair of engagement projections of the reinforcement member are introduced into the engagement groove.

Regarding claim 2, figure 5, wherein the second connector comprising a housing (22), and a plurality of contacts (24) supported by the housing thereof, and wherein the engagement groove is provided in the housing of the second connector.

Regarding claim 3, wherein the reinforcement member including two reinforcement members, and the engagement groove including two engagement grooves, and wherein the two reinforcement members are respectively provided in association with the two engagement grooves.

Regarding claim 4, figure 1, wherein the housing of the first connector comprising a pair of opposed side walls extending in the first direction, and a pair of fixture grooves (12a) respectively extending along the side walls, and wherein the two reinforcement members are respectively fixed in the corresponding fixture grooves of the housing of the first connector.

Regarding claim 5, figures 4 and 5, wherein the housing of the first connector having generally rectangular shape as seen in the connecting direction, and wherein the engagement projections of the two reinforcement members are disposed in the vicinity of four corners of the rectangular housing of the first connector.

Regarding claim 9, figure 11, wherein the reinforcement members each including a main portion (16a) extending along the corresponding fixture groove, and wherein the engagement projections of each of the reinforcement members project from opposite ends of the main portion in the first direction.

Regarding claim 10, wherein the first connector comprising a connector mounted on a circuit board, and the reinforcement member is soldered to the circuit board (column 3, lines 34-37).

Allowable Subject Matter

3. Claims 6-8 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

4. The following is an examiner's statement of reasons for allowance:

None of the reference discloses the engagement projections of the reinforcement member including first oblique guide surfaces and the engagement groove associated with the reinforcement member including a pair of second oblique guide surfaces, in combination with the other claimed elements of the embodiments recited.

5. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
